

Greener Choices for a Greener World

*A product guide to more
sustainable options*

Gordon Food Service® is committed to a cleaner, safer and more sustainable environment. We want to be good custodians of our portion of the planet that we have been assigned to care for, and continue to soften our imprint while conducting business on it. Each day we will contribute to the well-being of our community and future generations by taking concrete actions that make all the difference.

Included below are new & improved packaging and chemical items that are all doing their part to contribute to a sustainable environment. Also included are items that have been around for much longer & have always been a great way to go green.

Glossary of “Green” Terms

Biodegradable	Material that decomposes into the basic elements of nature, such as carbon, hydrogen, oxygen and nitrogen, by the action of microorganisms.
Compostable Plastic	In order for plastic to be called compostable, three criteria need to be met: 1. Biodegrade - breaks down into carbon dioxide, water, biomass at the same rate as cellulose (paper) 2. Disintegrate - the material is indistinguishable in the compost, that it is not visible & needs to be screened out. 3. Eco-toxicity - the biodegradation does not produce any toxic material, and the compost can support plant growth.
Degradable/ Oxo-Degradable	Materials that lose their chemical and mechanical properties within a period of time by any means. This can be caused by sunlight, heat, pressure or a combination of all.
EcoLogo	Certification awarded to products/services that are environmentally preferable throughout their entire life. These products are subject to a thorough evaluation & auditing process.
FSC Certification	Forest Stewardship Council. An international certification & labelling system that guarantees that the forest products you purchase come from responsibly managed forests & verified recycled sources.
PET	Polyethylene terephthalate. A type of plastic used to make soft drink bottles & other types of food containers.
PLA	PolyLactic Acid. Material made from corn starch, with a look & feel of petroleum-based plastic.
PSM	PLA Starch Material. The only pure poly-lactide derivative available with no chemical hardening agents or crystalline fillers. It is also commonly referred to as Plant Starch Material.
